

## PrimeGrid's Mega Prime Search

On 24 July 2014, 3:59:36 UTC, PrimeGrid's Mega Prime Search project found the Mega Prime:

$$129 \cdot 2^{3328805} + 1$$

The prime is 1,002,073 digits long and will enter Chris Caldwell's "The Largest Known Primes Database" (<http://primes.utm.edu/primes>) ranked 98<sup>th</sup> overall. Of note, this is the 100<sup>th</sup> mega prime ever found.

The discovery was made by Eric Clifton of the United States using an Intel i7-2700K @ 3.5GHz with 16GB RAM, running Microsoft Windows 7 Professional. This computer took about 46 minutes to complete the primality test using LLR. Eric is a member of the [H]ard|OCP Team.

The prime was verified on 27 July 2014, 3:34:11 UTC by Vlad Vasiyarov of the Ukraine using an Intel(R) CPU @ 1.60GHz with 8GB RAM, running Microsoft Windows 7 Ultimate. This computer took about 2 hours 19 minutes to complete the primality test using LLR. Vlad is a member of the Keep The Fire Alive! Team.

Credits for the discovery are as follows:

1. Eric Clifton (United States), discoverer
2. PrimeGrid, et al.
3. Srsieve, sieving program developed by Geoff Reynolds
4. PSieve, sieving program developed by Ken Brazier and Geoff Reynolds
5. LLR, primality program developed by Jean Penné
6. OpenPFGW, a primality program developed by Chris Nash & Jim Fougeron with maintenance and improvements by Mark Rodenkirch

Entry in "The Largest Known Primes Database" can be found here:  
<http://primes.utm.edu/primes/page.php?id=118246>

OpenPFGW, a primality program developed by Chris Nash & Jim Fougeron, was used to check for Fermat Number divisibility (including generalized and extended). For more information about Fermat and generalized Fermat Number divisors, please see Wilfrid Keller's sites:

- <http://www.prothsearch.net/fermat.html>
- <http://www1.uni-hamburg.de/RRZ/W.Keller/GFNfacs.html>

Generalized and extended generalized Fermat number divisors discovered are as follows:  
 $129 \cdot 2^{3328805} + 1$  is a Factor of  $xGF(3328804, 7, 5)$

Using a single PC would have taken years to find this prime. So this timely discovery would not have been possible without the thousands of volunteers who contributed their spare CPU cycles. A special thanks to everyone who contributed their advice and/or computing power to the search - especially all the sievers who work behind the scenes to make a find like this possible.

# PrimeGrid's Mega Prime Search

The Mega Prime Search will continue to seek even larger primes. To join the search please visit PrimeGrid: <http://www.primegrid.com>

## About PrimeGrid

PrimeGrid is a distributed computing project, developed by Rytis Slatkevičius, Lennart Vogel, and John Blazek, which utilizes BOINC and PRPNet to search for primes. PrimeGrid's primary goal is to bring the excitement of prime finding to the "everyday" computer user. Simply download the software and let your computer do the rest. Participants can choose from a variety of prime forms to search. With a little patience, you may find a large or even record breaking prime.

### BOINC

The Berkeley Open Infrastructure for Network Computing (BOINC) is a software platform for distributed computing using volunteered computer resources. It allows users to participate in multiple distributed computing projects through a single program. Currently BOINC is being developed by a team based at the University of California, Berkeley led by David Anderson.

This platform currently supports projects from biology to math to astronomy. For more information, please visit BOINC: <http://boinc.berkeley.edu>

### PRPNet

PRPNet is a client/server application written by Mark Rodenkirch that is specifically designed to help find prime numbers of various forms. It is easily ported between various OS/hardware combinations. PRPNet does not run each PRP test itself, but relies on helper programs, such as LLR, PFGW, phrot, www, and genefer to do the work.

For more information, please visit PrimeGrid's PRPNet forum thread: [http://www.primegrid.com/forum\\_thread.php?id=1215](http://www.primegrid.com/forum_thread.php?id=1215)
